```

Hallo zusammen und ein gutes Neues noch,

ich sitze schon seit 2 Tagen am Open Core Bootloader 0.6.5 und ich bekomme es einfach nicht hin. Open Core startet nach Catalina Auswahl bleibt er irgendwie hängen und ich weiß nicht was es ist bei BIG SUR bekomme ich KP. Warum auch immer. Lt. <https://opencore.slowgeek.com> scheinen die Einstellungen völlig in Ordnung zusein aber ich bleibe immer an einer Stelle stehen danach passiert nix mehr.

Liegt es vllt an der iGPU???

Kann mir jemand von Euch BITTE helfen???

Vielen Dank schonmal und einen schönen Sonntag
