

OC DELL Latitude E6420

Beitrag von „Mo-5590“ vom 17. Februar 2021, 13:57

Hi vansmocs,

First, i'm not a good teacher hhh sorry, but I have some personal points to you:

1-Don't install macOS with windows because you'll see many problems. For me use 2 hard drive Hdd or SSD: One for Win, Ubuntu and the efi open core partition with fat32 of course and the second will be for the macOS big sur.

2-You should download macOS from any link of someone on the net because with no Apple (macOS) system you can't download it.

3-Prepare your usb macOS on windows with transmac. See here:
<https://www.acutesystems.com/scrtm.htm>

4- Now after all these steps you can beginning to install macOS on your dell.

Good luck and it's not the one solution they are many on the net...
