

OC DELL Latitude E6420

Beitrag von „Luluuuuu18“ vom 18. Februar 2021, 09:18

Hi,

Thank you for the EFI files !

I am stuck to boot on the usb...

I have installed the EFI folder onto the usb directly (and not on the hard drive where MacOS is already installed), but i can't boot on the usb...

And when i try to add the boot argument in the BIOS, i'm not able to find the bootx64.efi...

This evening i will try as you said : directly install the EFI on a partition of the hard drive
