

OC DELL Latitude E6420

Beitrag von „Mo-5590“ vom 19. Februar 2021, 14:10

Hi everyone,

i m so glad and proud of you.you can now install macOS big sur.

for the graphic problem

and before we explain the solution please forget the 4mo or 512mo or 1024mo...etc

our macOS big sur detect our screen as a monitor not an intel or Nvidia graphic ok

the solution is first download this tool

<https://www.macupdate.com/app/mac/62265/hackintool>

after that go to display

and see this pics

use the kext in your open core efi and activate it on your list

boot your dell

here we go to the final step

go to monitor preference and etalonat it at maximum you see a full hd graphic now

At the end use this app to see your screen pixel

<https://apps.apple.com/us/app/easyres/id688211836?mt=12>
