

Clover r5125 ff. und die Quirks

Beitrag von „Wolfe“ vom 19. Februar 2021, 19:24

LuckyOldMan Acidantheras changelog ist in Bezug auf bootstrap nicht wirklich explizit, aber ich habe dafür bei Dortania das hier gefunden:

- „Note: With OpenCore 0.6.6, Bootstrap.efi has been replaced with LauncherOption. See here for more info on updating: [Updating Bootstrap in 0.6.6](#)“

With OpenCore 0.6.6 and newer, we are now able to launch OpenCore directly from our firmwares without needing a launcher (Bootstrap.efi or BOOTx64.efi) as an intermediary. This allows us to add OpenCore to our motherboard's boot menu and prevent issues where either Windows or Linux try to overwrite the `EFI/BOOT/BOOTx64.efi` path, which can happen when installing or updating Windows and therefore breaking OpenCore's ability to boot.“

Das finde ich sehr spannend
