# OC DELL Latitude E6420

## Beitrag von „Mo-5590" vom 23. Februar 2021, 16:47

see your bios because i have no idea what is your problem...

Just try and trust me you will do it....it is not easy but you ll do it at the end...

Good luck

I think after many times of trying that the problem of stability coming form macos big sur not our efi..

I use catalina now 10.15.7 and it is amazing

Be carrefull:

Our cpu and graphics i5 or i7 2nd gen. Are not supported from mojave to big sur...

The name of our graphics is detected by the big big big team group of opencore and clover i love these masters hhhh

I have for exemple modify the graphic name as you see but i see no change...

Enjoy friends and thanks for all....
