Gibt ein neues Tool in OpenCore 067 um Kexts zu checken: **acdtinfo**

A screenshot of a macOS terminal window. The title bar shows the window name 'stunnah — acdtinfo — 114x27'. The terminal content shows the execution of the 'acdtinfo' tool. It displays the last login time, the command path, and a list of installed kexts with their versions and release dates. The kexts listed are Lilu, AppleALC, AirportBrcmFixup, BrightnessKeys, CPUFriend, CpuTscSync, DebugEnhancer, HibernationFixup, NVMeFix, RestrictEvents, RTCMemoryFixup, SMCBatteryManager, SMCProcessor, SMCDellSensors, SMCLightSensor, SMCSuperIO, VirtualSMC, and WhateverGreen. The output indicates that some kexts have no version info, and the process ends with '[Prozess beendet]'.
