Habe hier gestern alle neu injected, die rausgeworfen die auf USB 3 standen, und die beiden neuen KEXTE dann reingezogen in die efi

The screenshot shows the Hackintool v3.5.3 interface. On the right, there is a sidebar with system icons (Wi-Fi, Bluetooth, Patch, Boot, NVRAM, Extensions, Displays, Sound, USB, Disks, PCIe, Power) and a 'USB' button. The main area displays details for a USB device:

Type	ID	Name	Series	Herstell...	Device ID
XHC	0x14	Cannon Lake PCH USB 3.1 xHCI Host Co...	300	0x8086	0xA36D

Below this, a table lists 'USB Ports' with columns: Type, Name, Location ID, Port, Connector, Dev Speed, and Device.
