Still no NAVI Support and still only controllable through Apple Remote Desktop from an other Mac machine.

I think, there won't be any support in 11.3 - but hope for any kind of changes with 11.4 beta

BlackScreen for NAVI GFX only cause "AMD6000Framebuffer.kext" still contains Hardware-IDs of RX6800, RX6800XT and RX6900XT.

Tried to fix this by struggling with kext-patches, but no luck so far.
