

Erledigt Dell XPS 13 9343 Finetuning

Beitrag von „grt“ vom 1. April 2021, 20:34

also.. das markierte (der blau unterlegte teil des pci-pfads) ist die uuid der nvme. die hab ich damals mit manjaro -> terminal und blkid rausgefunden und eingetragen. danach kommt dann irgendwie der pfad zu der grub-bootdatei - /EFI/Manjaro/gubx64.efi - in deinem fall .../ubuntu...

ich denk, du kannst den pfad abschreiben, ersetzt die uuid durch deine, und machst aus "manjaro" "ubuntu".

ich kann auch grad die smbios nullen, und dir die config anhängen. dann kannst du cypypasten. momentchen....

edith: anhang vergessen...
