

Mac mini M1 drive wear

Beitrag von „Macko“ vom 4. April 2021, 23:52

I'm happy with the mac mini. I have a 512 GB drive and I hope it lasts at least 4 years.

What do you think about disc wear on the Apple M1?

In the two weeks that I installed various programs, Windows via Parallels and others, I wrote down what is in the attachment. It is OK ?

The screenshot shows the 'Important Health Indicators' section of the macOS Health app. It contains two rows of data:

Indicator	Value	Status
007 Data Units Written:	1 547 819 (738.1 GB)	Status:  100 % OK
014 Media and Data Integrity Errors:	0	Status:  100 % OK
