

Hackintosh bootet nicht weiter als das Apple Logo

Beitrag von „Arkturus“ vom 8. April 2021, 15:06

in der Schule würde man sagen: Setzen 6,

was soll das denn?

The screenshot shows the config.plist editor interface. The top bar includes window controls, a title bar 'config.plist', and a format dropdown set to 'Dictionary'. Below the title bar are icons for 'Neues Kind-Element', 'Neues Geschwister-Element', and 'Löschen'. The main area is a table with columns 'Property-List', 'Typ', and 'Wert'. The 'Security' section is expanded, showing various properties and their values.

Property-List	Typ	Wert
Wurzel	Dictionary	8 Schlüssel/Wert-Paare
> ACPI	Dictionary	4 Schlüssel/Wert-Paare
> Booter	Dictionary	2 Schlüssel/Wert-Paare
> DeviceProperties	Dictionary	2 Schlüssel/Wert-Paare
> Kernel	Dictionary	5 Schlüssel/Wert-Paare
> Add	Array	9 geordnete Elemente
> Block	Array	0 geordnete Elemente
> Emulate	Dictionary	2 Schlüssel/Wert-Paare
> Patch	Array	1 geordnete Elemente
> Quirks	Dictionary	11 Schlüssel/Wert-Paare
> Misc	Dictionary	6 Schlüssel/Wert-Paare
> BlessOverride	Array	0 geordnete Elemente
> Boot	Dictionary	10 Schlüssel/Wert-Paare
> Debug	Dictionary	4 Schlüssel/Wert-Paare
> Entries	Array	1 geordnete Elemente
> Security	Dictionary	8 Schlüssel/Wert-Paare
AllowNvramReset	Boolean	NO
ExposeSensitiveData	Zahl	3
HaltLevel	Zahl	2147483648
RequireSignature	Boolean	NO
RequireVault	Boolean	NO
ScanPolicy	Zahl	16712451
> Tools	Array	1 geordnete Elemente
> NVRAM	Dictionary	4 Schlüssel/Wert-Paare
> PlatformInfo	Dictionary	9 Schlüssel/Wert-Paare
> UEFI	Dictionary	5 Schlüssel/Wert-Paare
