

Nach Aktivierung von FileVault startet das System nicht mehr

Beitrag von „Erdenwind Inc.“ vom 23. April 2021, 14:38

He has the z170x so I had to replace his AtherosE2200Ethernet.kext with IntelMausi and replaced his USBPorts.kext with USBInjectAll.kext (don't forget to update the setting for this inside the config.plist).

I copied his EFI, replaced the serial numbers and did these changes and everything works perfectly. Sadly, I couldn't figure out, where I did the mistake. Possibly I forgot to install the ApfsDriverLoader.efi

Aber ich hab da was gefunden für dich. Magst du das mal ausprobieren aufm Stick? NVRam Reset mal machen noch vorher...
