Thx for your response.

I was using WEG with the smbios ima pro 1,1, and then my DisplayPort audio wasn't recognized.

After switching to Mac Pro 7.1 without WEG my DP Audio devices are recognized.

Only problem (from time to time): Audio device on DP is not working.

So... until WEG isn't supporting 6x00 GPUs, I will stick to Mac Pro 7,1.

I don't have any problem beside tat issue. Also DRM stuff (Netflix) is working properly.
