Thx for your response.

I was using WEG with the smbios ima pro 1,1, and then my DisplayPort audio wasn't recognized.

Interesting. I did briefly test the DP sound on the three DP connections (including USB-C), and all worked fine. That's with WEG + MacPro7,1. I wonder if MP 7,1 is making some difference.

Now you are on MacPro7,1 maybe you should try WEG again? Could depend on the specific monitor(s) as well I suppose.
