

RX 6xxx(XT) Thread, Lieferbarkeit, Kompatibilität, Leistung

Beitrag von „fabiosun“ vom 5. Mai 2021, 15:45

I have tested a 6900xt of a user in another forum

Candle benchmark in Davinci resolve classic 66 and 6 nodes produces a speed comparable to my previous Vega 64 in metal

17 fps (66 nodes)

21 fps (6 TRN nodes)

In a job i have done in 8k i cant see any workflow difference with my actual GPU (3090)

Candel Benchmark is not good with first release (metal/OSX drivers)

System used AMD 3970x 256 Gb AMD 6900 xt
