

Catalina Installation bleibt hängen

Beitrag von „Raptortosh“ vom 14. Mai 2021, 18:24

Wer sagt sowas?! OC ist besser als Clover.

Is OpenCore unstable as it's a beta

Short Answer: No

Long Answer: No

Version 0.6.1 was originally designed to be the official release of OpenCore as it would have proper UEFI/Apple Secure Boot, and would be the 1 year anniversary of OpenCore's release as a public tool. However, due to circumstances around macOS Big Sur and the rewriting of OpenCore's prelinker to support it, it was decided to push off 1.0.0 for another year.

Wieso integrieren die Clover devs dann selbst OpenCore?! Weil sie selbst nicht in der Lage waren, das zu programmieren...
