What is [tt] AppleAPFS.efi [/ tt]?

Why do you waste your time with clover? There is a opencore efi for This Notebook, so Why Use a bootloader Which has (an old) OpenCore integrated?

This is a modified version of clover apfs driver . and I tried to understand both bootloaders more and I will try working on their multiboot cause Want to have windows ,catalina ,and bigsur together . I know i could have one boot loader for example catalina working openCore EFI on a usb stick ,and Clover at internal ssd EFI to switch easily between catalina and bigsur from bootloader .the other way is to put 2 seperate EFI of working opencore for catalina and bigsur and switch between them by pressing F9 from bios and selecting custom bootloader .however if I could boot both with one opencore EFI I will be glad if anyone help .
