> Why do you need clover and opencore? Only opencore will also work. Opencore can Boot Big Sur and Catalina ... You can also Boot Windows with opencore ...

I couldn't do multiboot Catalina and bigsur with the EFI of this post. windows stucked and couldn't also do boot to Catalina. and with another EFi from another [forum](#) I did multiboot with windows but several of my devices was disabled by openCore .also I couldn't buy new Wlan then I tried my old netbook WIFI card AR9285 and it couldn't be load by both of EFI , then I searched the web and I got modified [IO80211Family](#) and in comments. I found a modified version of HS80211Family.kext and AirPortAtheros40.kext and I use them with opencore and It detect them. these files was with a modified version of clover which is almost the first version of clover which use opencore.efi then all became better for me and i am able to boot windows and bigsur with clover.

that's the **[link](#)**
