

# [Sammelthread] MacOS Monterey 12.x DEV-Beta Erfahrungen

**Beitrag von „Macko“ vom 14. Juni 2021, 19:00**

Upgraded from version 11.4 to Monterey using macOSDeveloperBetaAccessUtility.

The system did not work after restart.

I tried various modifications of OpenCore but nothing.

I traded OpenCore for Clover and Monterey. It's a shame, but that I have to go back to Clover !!!

Here are both EFI, I don't know how to customize openCore to work for Gigabyte with HD530 graphics ???
