

# Diskussion: Serial für Apple Dienste (iMessage & Co.)

Beitrag von „macdream“ vom 2. Juli 2021, 13:18

Idealerweise gültig aber nicht vergeben habe ich von [ozw00d](#) bzw. von der [verlinkten](#) Seite gelernt.

## Serial Number Validity

Now enter the serial into the [Apple Check Coverage page](#), you will get 1 of 3 responses:

We're sorry, but this serial number isn't valid	Valid Purchase date	Purchase Date not Validated

This last one is what we're after, as we want something genuine but currently not in use by anyone. Now we can translate the rest of the values into our config.plist -> PlatformInfo -> Generic:

- Type = SystemProductName
- Serial = SystemSerialNumber
- Board Serial = MLB
- SmlUUID = SystemUUID
