

RX 6xxx(XT) Thread, Lieferbarkeit, Kompatibilität, Leistung

Beitrag von „fabiosun“ vom 5. Juli 2021, 11:51

sorry [walter77](#) I have posted original project with is lock to 24fps..you can pu there 250 in project settings

~~You should test 6 nodes and 66 nodes~~ I have read better now (it seems only two gpu are used for playback..but maybe I am wrong on this

I have this results with only a GPU with my trx40 in signature

6 nodes

30/32 fps

66 nodes

40/42 fps

On intel platform. you can try also to force Metal and test then to force in auto and test again

In the past on intel platform Davinci had a weird behaviour for this two settings

Thank you a lot for your test
