

OpenCore Bootloader aktuelle und ältere Versionen

Beitrag von „Raptortosh“ vom 6. Juli 2021, 09:41

v0.7.1

- Added `SyncTableIds` quirk to sync modified table OEM identifiers
- Added CPU Info (MSRs) dumping to `SysReport`
- Updated builtin firmware versions for SMBIOS and the rest
- Fixed `PowerTimeoutKernelPanic` on macOS 12
- Fixed transparency click detection on OpenCanopy boot entries
- Added PCI device info dumping to `SysReport`
- Fixed `SetApfsTrimTimeout` on macOS 12
- Documented requirement for `SetDefault.icns` width to match `Selector.icns` width
- Added explicit warn and safe fallback to builtin picker on failure to match the above
- Added VSCode source level IDE debug config example to debug docs
- Added other minor debug docs updates
- Fixed incorrect timeout of built-in picker on IA32
- Added support for custom kernels on ESP partition
- Fixed `DEBUG ASSERT` on pressing change entry keys with single boot entry in OpenCanopy
- Added recommended `Apple12` and `Windows11` flavours
- Added `TpmInfo` tool to `DEBUG TPM` status
- Fixed incorrect OpenCanopy initial display when default entry beyond right of screen
- Fixed `ProvideCurrentCpuInfo` MSR patch on macOS 12
- Fixed `AppleXcpmForceBoost` patch on macOS 12
