Please excuse if you feel that I am being rude. I don't really know whether I have ADSL or VDSL. I am 100Mbps so when I look up the Oockla web I get a pretty similar result that I posted in the terminal.

But my router supports 1GBps up and down, which should definitely be VDSL as ADSL doesn't have that much limit.

I bought a 100Mbps plan up and down buy

I am using Jio FIber Connection

I have a fiber optic connection.

This device is WiFi and Lan. I have connected my LAN to the TV and with WiFi I use all devices.
