I am using same motherboard but different processor so I have tried your configuration but didn't get success.

I am installing Big Sur on this configuration.

Do you please help me what thing do I need to change as per my below configuration

- 1) Processor Core i7 4770K
- 2) 2x CMZ16GX3M2A1866C10 16GB(8GB x2) DDR3 Ram (Insert into DIMM\_A2 and DIMM\_B2 Slot)
- 3) 3x Sata HDD (This all three is only for backup)
- 4) Intel 750 Series NVME inserted in PCIEX16\_1 Slot (Use this for install macOS)
- 5) Gigabyte AMD Radeon Rx590 8GB graphics card in PCIEX16\_2 Slot

I have tried myself by reading opencore Dortania guide but didn't get success

I also downloaded your EFI and generate SMBios but didn't get success.

So do you please help me to what to change for my above configuration for proper installation

My log file is also attached
