Dell Latitude 7280

Beitrag von „takobaba" vom 12. August 2021, 03:19

yes it worked for me too, thank you so much [Hecatomb](#)

Here is my EFI, I decided to keep it all in one thread, let me know if its better to create a new thread.

I have basically the same laptop as [Hecatomb](#) but only with i5 7300U CPU and with 1366x768 Screen.

Pretty much everything works,

trackpad,

audio(alcid=21),

wifi,

fn keys for brightness and volume,

except sleep, I am still working on that.

HDMI ports dont work so I had to change the vga port details to same as [Hecatomb](#) s EFI.

I guess its best for people to just use the EFI from the author not mine
