

# Fehlender Eintrag im Bootpicker

**Beitrag von „plutect“ vom 14. August 2021, 18:16**

Das Problem hatte ich auch aber im Netz hatte ich das gefunden und seitdem klappt mein Mojave auch mit OC 0.72:

UEFI > APFS: Increased default APFS MinDate and MinVersion to macOS Big Sur for better security. These keys are the minimal allowed APFS driver date and version to be loaded. Examples:

- MinDate and MinVersion 0 is default (currently Big Sur), leave this value if you are using Big Sur or Monterey
- MinDate=20210508 and MinVersion=1677120009000000 is for Big Sur 11.4 (20F71)
- MinDate=20200306 and MinVersion=1412101001000000 is for Catalina 10.15.4 (19E287)
- MinDate=20190820 and MinVersion=9452750070000000 is for Mojave 10.14.6 (18G103)
- MinDate and MinVersion -1 is disabled (not recommended).

It's required to change MinDate and MinVersion in the APFS section for macOS versions older than Big Sur.
