

OC DELL Latitude E6420

Beitrag von „Mo-6420“ vom 18. August 2021, 19:27

hi

i have some advices first if a pc or laptop the bios must be update the last version and if it's an old Mac use the patch because opencore patch is for the unsupported Mac

than use clover or openCore to take your APCI folder this is the step more difficult and I have some advices here too use dsdt patched not normal

than creat your own config.plist use tools for that and there are many methods

At the end, You can do more and a perfect EFI folder if you have motivation

Good luck

and Thank you
