# OC DELL Latitude E6420

Beitrag von „Mo-5590" vom 20. August 2021, 12:00

To B4tMaxt

I see your 2 laptops and MacBook

First sorry for the late

Second

For MacBook it's easy patch your usb macOS Monterey with openPatcher

But I choose Thinkpad w540 it's a very good laptop and the last bios is 15-06-2021 So you have a good chance my friend because it's easy to do your own OC EFI folder with no problems

But if your fUJITSU 400MT is no supported by the factory here we have a big problem for example if the last bios 2011 we can't

If the last is 2018 or 2019...etc here we have no problem like Thinkpad

i m so glad to help you but I haven't these PC laptop or Mac

so I'm sorry believe me you can do more than me

just try

good luck and thank you
