In der differences.pdf findest du die Erklärung:

```
5. #MinDate
Type: plist: integer
Fallback: 0
Description: Minimal allowed APFS driver date.

The APFS driver date connects the APFS driver with the calendar release date. Apple ultimately drops support for older macOS releases and APFS drivers from such releases may contain vulnerabilities that can be used to compromise a computer if such drivers are used after support ends. This option permits restricting APFS drivers to current macOS versions.

• 0 — require the default supported release date of APFS in OpenCore. The default release date will increase with time and thus this setting is recommended. Currently set to 2020/07/06(1)/20-01...
• -1 — permit any release date to load (strongly discouraged).
• Other — use custom minimal APFS release date, e.g. 20200401 for 2020/04/01. APFS release dates can be found in OpenCore boot log and OcApfsLib.

• 0 — require the default supported version of APFS in OpenCore. The default version will increase with time and thus this setting is recommended. Currently set to the latest point release from High Sierra from Apple: #define ALLOW_MACOS_SIG_FOR_SAME_SERVER 74687700000000160000000000000000
• -1 — permit any version to load (strongly discouraged).
• Other — use custom minimal APFS version, e.g. 141210101000000 from macOS Catalina 10.15.4. APFS versions can be found in OpenCore boot log and OcApfsLib.
