HP Elite 8300 SFF HWC - Fence FV-HB1200

Beitrag von „GoodBye" vom 30. August 2021, 10:08

Welcome [Gertjuh](#) !

1st) better Buy the HP8300 with the 3570 CPU !

Wlan and Bluetooth should work OOB with this Efi and your Card.

If you install Monterey, do not forget to set SecureBootModel Option to Disabled.

And you have to generate a Serial for the SMBIOS with Hackintool, and integrate in to the config.plist.

Best is to use the demo config.plist of the downloadet OpenCore in the Documents Folder, and then Copy the Parts from it.

I have used the EFI also with BCM943602CS on PCI-E Adapter only I had Connected the USB with a Cable to the Back USB, and not Internal !

therefore you have to patch USB ports, cause I have deactivated Internals in Bios and with the Patching as well.
