

OC DELL Latitude E6420

Beitrag von „Mo-5590“ vom 4. September 2021, 09:33

I try to accelerate graphics

First, all master of hackintosh has problems with unsupported Mac or old PC and Laptop

Second I use Opencore and the efi is here it works for all new macOS (Catalina, Big Sur and Monterey and it didn't work

Now I try with my old Clover just I built a new one because it's a long time for me to use this bootloder and I'm trying but it didn't work too

Patch or other tools didn't work on my dell so I'm trying

For everyone who have problems with refi clover last version use this folder of drivers replace it in your clover and all it work

Now we are at version 51r39
