[Zitat von karacho](#)

[fabiosun](#) I havn't test it. Is it safe to change VirtualSMC with FakeSMC?

On my rig I have no problems with fakesmc

I used it daily with latest Monterey beta 6 and Big Sur 11.6 release

To explain better (I hope)

with:

**FakeSMC.kext**

**RadeonMonitor.kext**

I have exposed:

- 1)Temperature\*
- 2)Memory utilisation
- 3)Device utilisation

\*In my Knowledge sensor exposed is equivalent to GPU Z GPU Temperature hot spot and not to GPU Temperature (usually lower than hot spot)
