

AMD Build - SMC, Temps, iCUE, Sensoren...

Beitrag von „fabiosun“ vom 26. September 2021, 18:17

[spacepilot3000](https://www.hackintosh-forum.de/forums/author/spacepilot3000/)

to read temperature of your GPU is mandatory to use Fakesmc.kext and radeonmonitor.kext

In this way is exposed Temperature hot spot (as you can see in windows with GPUZ app)

if kexts's combination above is used you can detect Hot Spot temperature with these:
