[Sammelthread] MacOS Monterey 12.x DEV-Beta Erfahrungen

Beitrag von „apfel-baum" vom 28. September 2021, 21:34

Krystian_89

monterey is not the final build at this moment, so errors, bugs are avaible-even driver/kext-bugs . so it could be possible, that the build before the current build runs without any problems as well- the next build not. -but even the final is a release for real-macs, - osx86 is not an official apple-project its a grey-area

kextupdates are available with the "kext-updater" or via for example github. it depens on the current projects - even the kextupdater has its sources from github .-so far as i know.

without knowing your configuration it is not easy to tell you, what could be the problem, it is not even not compareable too.

hackingtosh is most times a stable or experimental stage of a building site - so most times it runs,- some times it is broken or unstable

ich hoffe mal das mein englisch verständlich ist- als nicht muttersprachler dieser sprache 🙂

edit 1 "you can say you to me" hihihi

edit 2 ich finde zoos so eintönig aber vielfältig da steht immer das die tiere "dangerous" sind, so viele tiere und dann sind nur diese dangerous vorhanden- ganz schön traurig für einen großen zoo 🙂
