Hi [Gertjuh](#) ,

you are welcome 👍

depends on the EFI you have downloaded there where some errors, but minor I had detected while updating to OC065, the last is 0.7.3 and has some evolution in it, right now I am on iMacPro1,1 with OC074 and Monterey Beta 8, the one before should be MacPro6,1 the same I have in use for a Server with a GT710 as well 😊

I have many EFI's until today, cause this is my Main Workplace since 2 Years+
