Beelink U55 "Hack Mini" - inkl. EFI

Beitrag von „milantar“ vom 1. Oktober 2021, 17:18

Hello Chris, excellent work!

I have recently bought a U55 Beelink to setup this project and I have followed different tutorials and indeed I'm always stuck after installing MacOSx and rebooting from the SSD drive. I have tested both Opencore and Clover bootloaders.

I have seen that you have attached two different bootloaders: CLOVER and OC.

Which of the two succeeded? is it updated?

And which OS version have you installed? Mojave ou Catalina ?

Could you please provide me more details such as which formatting tool and procedure to create the USB drive.

I'd really appreciate your help.

Kind Regards,

[rapport]

Milan
