

# Radeon GPU Temperatur mit VirtualSMC

Beitrag von „kaneske“ vom 3. Oktober 2021, 19:13

[fabiosun](#) yes as [griven](#) told, I've got an Custom Loop, my Nitro+ is in.

By the Way: there ist only TIM on the Die, no LM, with LM the Game is much more changed.

Bit risky, but up to 10K more dropped Temps.

Unbelievable, seemed to me too, but on an VII with LM the Drop came at max OC with LM an the HotSpot went to around 40! Really.

Maybe [Mork vom Ork](#) can report of his Temps, in case he has used LM i think, also with an 6900XT (Reference) in a custom Loop.

[Aluveitie](#), tolles Monitoring, macht total Spaß endlich die Coretemp mal zu sehen! Bekommst du die Frequenz auch rein?
