

Radeon GPU Temperatur mit VirtualSMC

Beitrag von „Aluveitie“ vom 4. Oktober 2021, 08:12

[fabiosun](#) What I've found are those Keys: AMDGPU_PP_SENSOR_GFX_SCLK,
AMDGPU_PP_SENSOR_GFX_MCLK, AMDGPU_PP_SENSOR_GPU_TEMP,
AMDGPU_PP_SENSOR_VCN_POWER_STATE, AMDGPU_PP_SENSOR_GPU_LOAD

So I might be able to get core/memory frequency and load besides the temperature.

Edit Just saw there are already fragments to read that from slice in the code, just commented out. He was playing around with that but did never finish it.
