

RX 6xxx(XT) Thread, Lieferbarkeit, Kompatibilität, Leistung

Beitrag von „Mork vom Ork“ vom 11. Oktober 2021, 19:31

I've just updated OC to 0.7.5 with BAR-support, but

when i set **UEFI - Quirks - ResizeGpuBars** to any other value than "-1", than after restarting the PC i got the BIOS Post Option message and than: NOTHING! <-- No matter, if C.A.M* is enabled in BIOS or not.

OC is my default boot EFI.

The second Value **Booter - Quirks - ResizeAppleGpuBars** still has the value "10" set. So it only shows this behavior, when *ResizeGpuBars* is set to any other value than "-1"

Just tested on my ASRock X299 CREATOR.

* = The setting for BAR support is named C.A.M (CleverAccessMemory) by ASRock.
