Misc/Security/AuthRestart nicht aktiviert ist? offline

Nö. Siehe Screenshot...

```
5. AuthRestart
Type: plist boolean
Fallback: false
Description: Enable VirtualSMC-compatible authenticated restart.
Authenticated restart is a way to reboot FileVault 2 enabled macOS without entering the password. A dedicated terminal command can be used to perform authenticated restarts: sudo fdesetup AuthRestart. It is also used when installing operating system updates.
```

48

VirtualSMC performs authenticated restarts by splitting and saving disk encryption keys between NVRAM and RTC, which despite being removed as soon as OpenCore starts, may be considered a security risk and thus is optional.
