Nö. Siehe Screenshot...

```
5. AuthenticatedRestart
   Type: plist boolean
   PlistFile: false
   Description: Enable VirtualSMC-compatible authenticated restart.

Authenticated restart is a way to reboot FileVault 2 enabled macOS without entering the password. A dedicated terminal command can be used to perform authenticated restarts: sudo fdesetup AuthenticatedRestart. It is also used when installing operating system updates.
```

VirtualSMC performs authenticated restarts by splitting and saving disk encryption keys between NVRAM and RTC, which despite being removed as soon as OpenCore starts, may be considered a security risk and thus is optional.

was war es dann? [karacho](#)
