

HP EliteBook 840 G1 & OpenCore Catalina/Big Sur

Beitrag von „tiico“ vom 15. Oktober 2021, 13:30

Hello all of you

i have read all the post and all informations about kext, OC, param and others things but i still have some problems

> My config is HP 840G1 with broadcom BCM94352HMB PCI card (for wifi/bluetooth)

> I use OC 7.0 and Bigsur 11.6

The PC boot (after a quite long time) and start to BigSur OS.

My problems are :

- After some try and modification, i have succeed to use the trackpad (thanks for explications) but buttons still not works.

- Wifi and bluetooth doesnt woks : wifi card seems to be identified (in device panel) but no bluetooth device seems to be identified. I use AirportBCRMfixup kext (with explications to deactivate bcrm4360 injector) and try some params (for instance add PCI card in OC param)... without any success...

If you have some ideas and/or some files that could be usefull it will be great

Thanks for your works, your informations .

I have attached my config.plist file if needed
