TINU - Der einfachste Weg zum USB-Installer

Beitrag von „ITzTravellnTime“ vom 26. Oktober 2021, 15:57

here is the new stable 3.0 release everyone:

- New algorithm for the detection of usable drives and partitions, unusable/unsupported drives and partitions will now be displayed and flagged as unusable/unsupported instead of being hidden (Doesn't apply APFS Volumes yet).
- Installer apps for OS X Lion and Mountain Lion will now be detected and flagged as unsupported.
- Added downloads for the OS X Lion, Mountain Lion and Yosemite installer apps in the dedicated installer app download window.
- License and legal overhaul. Amongst other things now you will be no longer prompted to agree to the license every time you want to make a usb installer (the license is still readable using the `About TINU` window).
- Various UI-related fixes and corrections.
- Various bug and crash fixes.
- Tested to work on macOS Monterey.

And it can be downloaded here:
