

# Mac OS Monterey - Probleme nach der Aktualisierung

Beitrag von „Chris007“ vom 27. Oktober 2021, 16:49

Da bekomme ich diesen Fehler:

Code

1. softwareupdate: unrecognized option '--ignore"macOS'
2. usage: softwareupdate <cmd> [<args> ...]
- 3.
4. \*\* Manage Updates:
5. -l | --list List all appropriate update labels (options: --no-scan, --product-types)
6. -d | --download Download Only
7. -i | --install Install
8. <label> ... specific updates
9. -a | --all All appropriate updates
10. -R | --restart Automatically restart (or shut down) if required to complete installation.
11. -r | --recommended Only recommended updates
12. --list-full-installers List the available macOS Installers
13. --fetch-full-installer Install the latest recommended macOS Installer
14. --full-installer-version The version of macOS to install. Ex: --full-installer-version 10.15
15. --install-rosetta Install Rosetta 2
16. --background Trigger a background scan and update operation
- 17.
18. \*\* Other Tools:
19. --dump-state Log the internal state of the SU daemon to /var/log/install.log
20. --evaluate-products Evaluate a list of product keys specified by the --products option
21. --history Show the install history. By default, only displays updates installed by softwareupdate.
22. --all Include all processes in history (including App installs)
- 23.
24. \*\* Options:
25. --no-scan Do not scan when listing or installing updates (use available updates previously scanned)
26. --product-types <type> Limit a scan to a particular product type only - ignoring all others
27. Ex: --product-types macOS || --product-types macOS,Safari
28. --products A comma-separated (no spaces) list of product keys to operate on.
29. --force Force an operation to complete. Use with --background to trigger a background scan regardless of "Automatically check" pref
30. --agree-to-license Agree to the software license agreement without user interaction.
- 31.
32. --verbose Enable verbose output

33. --help Print this help
