Thank you so much for your hard work and you will be appreciated.

I have been using macOS Big Sur for a long time with the ripo of EF given by you.

Today I updated the macOS Monterey but one problem that I read is that the graphics problem is showing Intel HD Graphics 4000 4MB.

I tried using the patch but it didn't work for me.

Can you tell me ?? All I can do is make it work.

Thank you

Device

Thinkpad T530
