OpenCore Board-ID Skip und Spoof mit VMM Patch >> macOS Monterey plus Updates trotz nicht unterstützter Board-ID

Beitrag von „TECHNIKVERBOT“ vom 28. Oktober 2021, 23:26

BID = Board-ID schätze ich?

Oh

[Supporting Spoofless Usage · Issue #543 · dortania/OpenCore-Legacy-Patcher \(github.com\)](#)

```
Only applicable for Kernel Space
As cpu_model_override is generated in the kernel, boot.efi must do it's own probe for CPUID. This adds another area where we
must patch, either by setting cpu_model to a newer model in NVRAM or patching out the Board ID check entirely.
• Usage of cpu_model_override is not ideal as Single User mode will ignore the argument
No support for H.265 with Polaris+ GPUs
```
