

I want to install Monterey on x79 !!!!!

Beitrag von „MacGrummel“ vom 2. November 2021, 20:05

The Quadro K4000 should run at macOS, it is a [Kepler-Card](#). But it has only PCI Express 2.0 x 16.

It may run fully supported with Systems like or newer than Mojave, but it also may not. But the main Problem will be the X79er Base.

What a kind of Boot-Loader did You have tried? Open Core, I hope?

It*s a little bit difficult to run old Systems with the latest Software..
