[SchmockLord](#)

I have had a reference 3090 on my AMD 3970x rig  
Now I have a 6900xt Reference

Davinci Resolve performance in my daily use till 4k timelines is always better in OSX (metal) than Windows 10/11 (cuda)

Less memory is a drawback for rt 6900xt for timeline greater than 4k on multiple tracks

Also Some common benchmark for both OS confirm this statement...

others software like le adobe after effects performs better with 3090 GPU, but usually this software is more CPU addicted than GPU
