Ok, I answered my question myself.

After succeeding in charging the battery to 1%, I now see the battery indicator and the battery settings that no longer appears when removing the battery.

look at your folder opencore and make sure that in folder apci there is a Batt0 like in mine please

And Good luck

The BATT0.AML is definitely not for this Laptop, the EC ACPI code contains only 8bit fields, no battery patches are required.

Code

1. Hello, does this work with intel HD 3000 or Nvidia?

Intel HD3000

I see your dock is transparent

and can i use monitor?

If you have the nVidia model, an external monitor is not possible. The digital outputs are tied to the Nvidia card, VGA could work, but not tested.
